AI, Automation & E-Learning.

Beyond standard web development, I engineer reasoning systems, autonomous workflows, and custom learning architectures that operate at scale.

Agentic AI & Reasoning Systems

CUSTOM LLM WORKFLOWS

02 / AI PLATFORM

Prompt Architect

Premium AI research prompt architecture platform for listed stock evaluation, fundamental metrics analysis, and structured equity research. Built with advanced prompting trees and contextual analysis methodologies.

- AI Research
- Vector RAG
- Prompt Engineering

VISIT PROJECT

03 / CONVERSATIONAL AI

CRM Booking Copilots

Autonomous agentic workflows designed to interview incoming enterprise prospects, calculate intent scores via semantic trees, and schedule confirmed calendar appointments into CRMs without human intervention.

- Claude 3.5
- Gemini
- CRM Webhooks

Workflow Automation & Data Pipelines

Complex Workflows & Sync.

I connect business logic across platforms using robust automation tools. Whether self-hosted or cloud-based, these pipelines eliminate manual work and sync data flawlessly.

- n8n
- MAKE.COM
- ZAPIER
- META GRAPH APIS
- AUTOMATION

- n8n Pipelines: Building custom, self-hosted automation workflows connecting Google Sheets, APIs, and databases securely.
- Make & Zapier: Cloud-based workflow design for rapid CRM updates and logic routing.
- Social Media Automation: Automated cross-posting to Facebook and Instagram via Meta Graph APIs.
- Data Extraction: Setting up pipelines for LMS systems and custom reporting endpoints.

Moodle LMS & Education Architecture

The Definite Lab

LMS Automation • Tools

Product lab featuring automation work, database structures, and custom Moodle plugin solutions for learning management systems.

VISIT

Custom LMS Solutions

Moodle • E-Learning

End-to-end Moodle setup, custom plugin development, theme customization, and automated grading & reporting workflows for educators.

How I build scalable web products.

I design and build full systems—focusing on product structure, UX, backend logic, and scalable integrations that make applications truly functional.

What I Build

Agentic AI

Conversational agents, RAG implementations, and intelligent CRM booking bots.

Moodle LMS

E-Learning platforms, custom plugins, themes, and automated grading logic.

Full-Stack Apps

Functional web applications with authentication, data, dashboards and logic.

n8n Automation

Self-hosted workflow automation connecting business processes and APIs securely.

E-Commerce

Product catalogues, cart flows, customisation, order journeys and conversion UX.

Dashboards

Analytics interfaces, admin panels, reporting systems and data-driven UI.

Make & Zapier

Cloud-based logic pipelines integrating CRMs, databases, and external services.

Digital Design

UI/UX, visual identity, and premium landing page experiences optimized for conversion.

Development Workflow

01 — 04

01

Understand

Business goal, users, required flows, content and technical constraints.

02

Design

Information architecture, responsive UI, components and interaction patterns.

03

Build

Frontend coding, integrations, database logic, AI agents, and automation.

04

Refine

Test flows, fix bugs, improve responsiveness, polish UX and prepare deployment.

"I don't just build websites — I build systems that keep working after I'm done."

LET'S BUILD SOMETHING

Got an idea? Let's turn it into a working product.
